

Process Handler: new employee

Description

A new employee process handler is now automating the application of necessary roles in Self-Service (the ability to log-in, record hours, request leave, access earning statements, etc.). This handler runs every 24 hours and adds roles once new employees onboarding is completed by Human Resources.

Exceptions: the handler looks for new employee roles applied to person records. Some employee roles imported from PayCom are still open and will not be picked-up by the handler. This is not common and as time passes such users are being caught and corrected.
